

Debriefing Transcript

Introduction

Narrator: Questioning can also be used as a journaling exercise. For example, ask students to address the following questions relevant to their assigned patient's situation.

Questions

Preceptor: Is the patient's health improving or getting worse? How do I know? What do the lab values, physical assessment changes, and diagnostic study results tell me?

Preceptor: Based on this information, what are likely outcomes for this patient at 3 months? 6 months? or 1 year?
